

International Workshop on Machine Learning and Quantum Computing
Applications in Medicine and Physics

Contribution ID : 35

Type : **Invited Talk**

Invited talk: Machine Learning as Applied Technology

Tuesday, 13 September 2022 10:30 (40)

Machine learning has evolved from an academic toolkit to a new computing technology that is already being used in technical and technology-related areas. The progress has been very impressive. While current academic research focuses on the improvement of core machine learning methods, the successful application of machine learning in real-life projects still requires constant monitoring and manual tuning.

This talk will highlight some of these lessons already learned, as well as some missing skills and points to consider in machine learning projects.
